* All Glass Combinations are also available as Epoxy Combinations (to order epoxy combination, change last digit from -2 to -8, i.e. BR01508)

ION SELECTIVE ELECTRODES

pHoEnix Electrode Company offers a wide range of Ion Selective Electrodes including:

1. Polymer Membrane Electrodes

Polymer membrane electrodes consist of various ion-exchange materials in an inert matrix such as PVC, polythene or silicone rubber. After the membrane is formed, it is sealed to the end of a PVC tube. The potential developed at the membrane surface is related to the concentration of the species of interest. Electrodes of this type include potassium, calcium and nitrate.

2. Solid State Electrodes

Solid state electrodes utilize relatively insoluble inorganic salts in a membrane. Solid state electrodes exist in homogeneous or heterogeneous forms. In both types, potentials are developed at the membrane surface due to the ion-exchange process. Examples include silver/sulfide, chloride and fluoride.

3. Gas Sensing Electrodes

Gas sensing electrodes are available for the measurement of ammonia, carbon dioxide and nitrogen oxide. These electrodes have a gas-permeable membrane and an internal buffer solution. The pH of the buffer solution changes as the gas reacts with it. The change is detected by a combination pH sensor within the housing. Due to the construction, gas sensing electrodes do not require an external reference electrode.

4. Glass Membrane Electrodes

Glass membrane electrodes are formed by the doping of the silicon dioxide glass matrix with various chemicals. The most common of the glass membrane electrodes is the pH electrode. Glass membrane electrodes are also available for the measurement of sodium ions.

Reference Electrodes

Ion Selective Electrodes are available as half-cells (mono) or as glass or epoxy combination electrodes. Measurements with half-cell electrodes require the use of an additional reference electrode. (Gas-sensing electrodes are combination electrodes and do not require a reference electrode).

Cat. No.	Housing	Type
5771427	Glass	Annular Ceramic
5771405	Glass	Glass Sleeve
5731428	Epoxy	Single Junction, Annular Sleeve
5731429	Epoxy	Double Junction, Annular Sleeve

Cable Lengths and Connectors

All combination electrodes and sensor half-cells are available with choice of connectors. Specify cable length when ordering.
